

"This book is an excellent and comprehensive resource, not only for helping developers easily adopt the foundational principles of building AI solutions with Foundry, but also for extending those principles into high-value, production-ready applications. It provides knowledge in a friendly, approachable format that can be readily applied to real-world scenarios."

Nick Heilman, principal cloud solutions architect, Microsoft

"A must-read for any AI practitioners looking to build agentic solutions with Microsoft Foundry! This book delivers the specific patterns and governance tools necessary to scale intelligent solutions within the Microsoft Foundry ecosystem."

Jack Lee, cloud solutions architect, Microsoft MVP

Building Agentic Solutions with Microsoft Foundry

Bringing AI into production involves much more than model deployment. Organizations need to control how agents access data, respond to users, and operate within governance policies. Microsoft Foundry offers a unified platform for building, scaling, and managing intelligent agents across an enterprise. This book helps you unlock Foundry's full potential through proven practices, clear examples, and actionable guidance.

Building Agentic Solutions with Microsoft Foundry is a hands-on guide for cloud engineers, AI developers, and technical leaders using Azure to implement enterprise-ready AI. You'll learn how to deploy large language models, connect them to secure data sources, manage quotas and usage, and architect agentic workflows. This book will become a trusted reference as you bring intelligent agents into your organization.

- Deploy large language models using Microsoft Foundry services
- Connect agents to other platforms and services with MCP tools
- Configure retrieval-augmented generation with Foundry IQ knowledge bases
- Fine-tune models and build multi-agent workflows
- Monitor usage and track performance with built-in observability features
- Apply reference architectures and patterns suited for enterprise environments
- Govern compliant and secure AI applications with confidence using scalable management tools

Dr. Colby T. Ford is a cloud AI architect and computational biologist at Tuple, a four-time Microsoft MVP awardee, and the author of *Genomics in the Azure Cloud*.
